Manufactured using two stages of high heat to first carbonize the bamboo, removing all of the starch and sugar, and then restructure the bamboo, reinforcing its natural strength characteristics. It's then fused together using phenolic resin - the same resins used to make bowling balls. The result is an extremely dense, durable exterior-use product composed of 87% natural, fused strand bamboo fibers and 13% resin. Looks and acts much like other natural hardwood products, specifically Ipe hardwood.
